The principles of holism

- ✓ The tendency in nature to form **wholes** that are greater than the sum of the parts through **creative evolution**
- ✓ the idea that **systems** (physical, biological, chemical, social, economic, mental, linguistic etc.) and their properties should be viewed as wholes, not as collections of parts

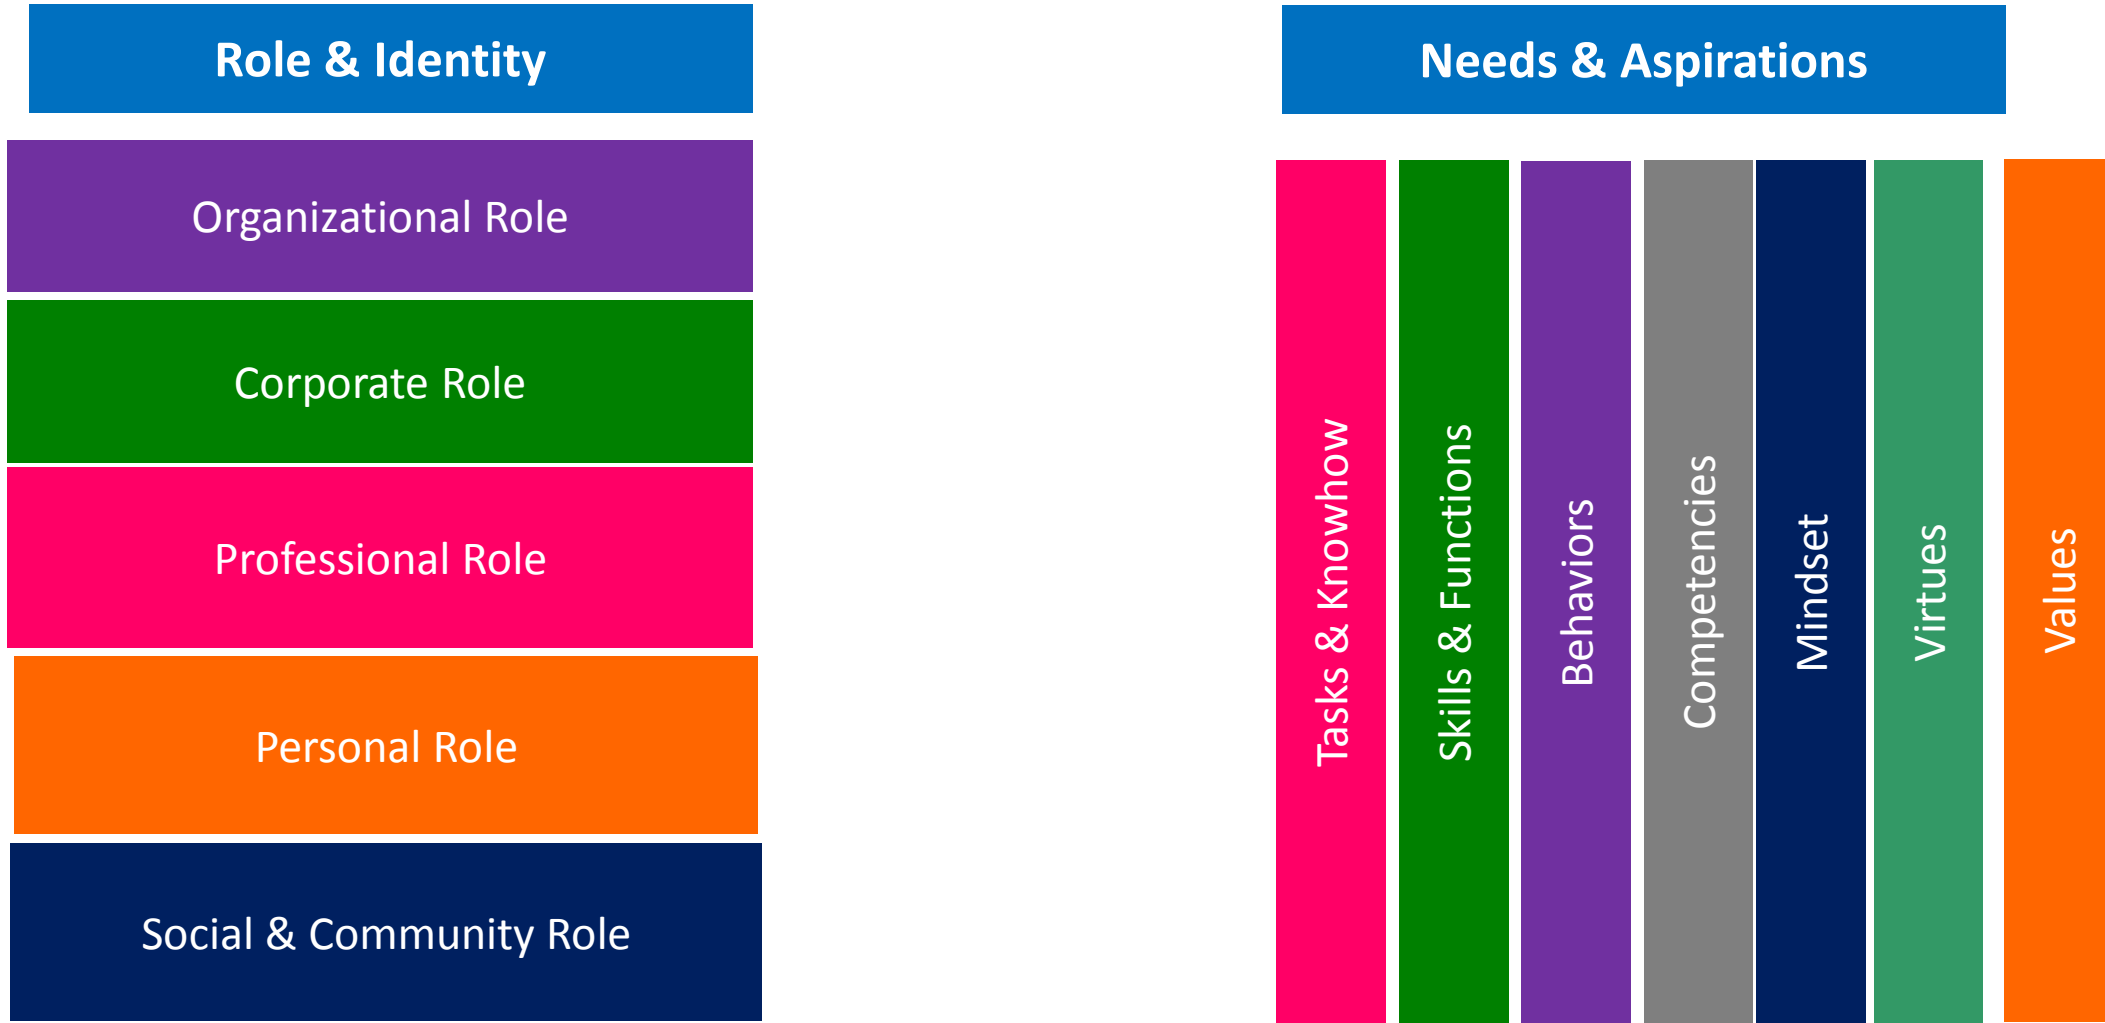

Aristotle, Metaphysics:
"The whole is more than the sum of its parts."

Aristotle viewed the world and each being in the world as mutually interrelated and part of a teleologically organized whole. The whole has a synergy generated by mutual interactions among constituents, which is more than the simple sum of parts.

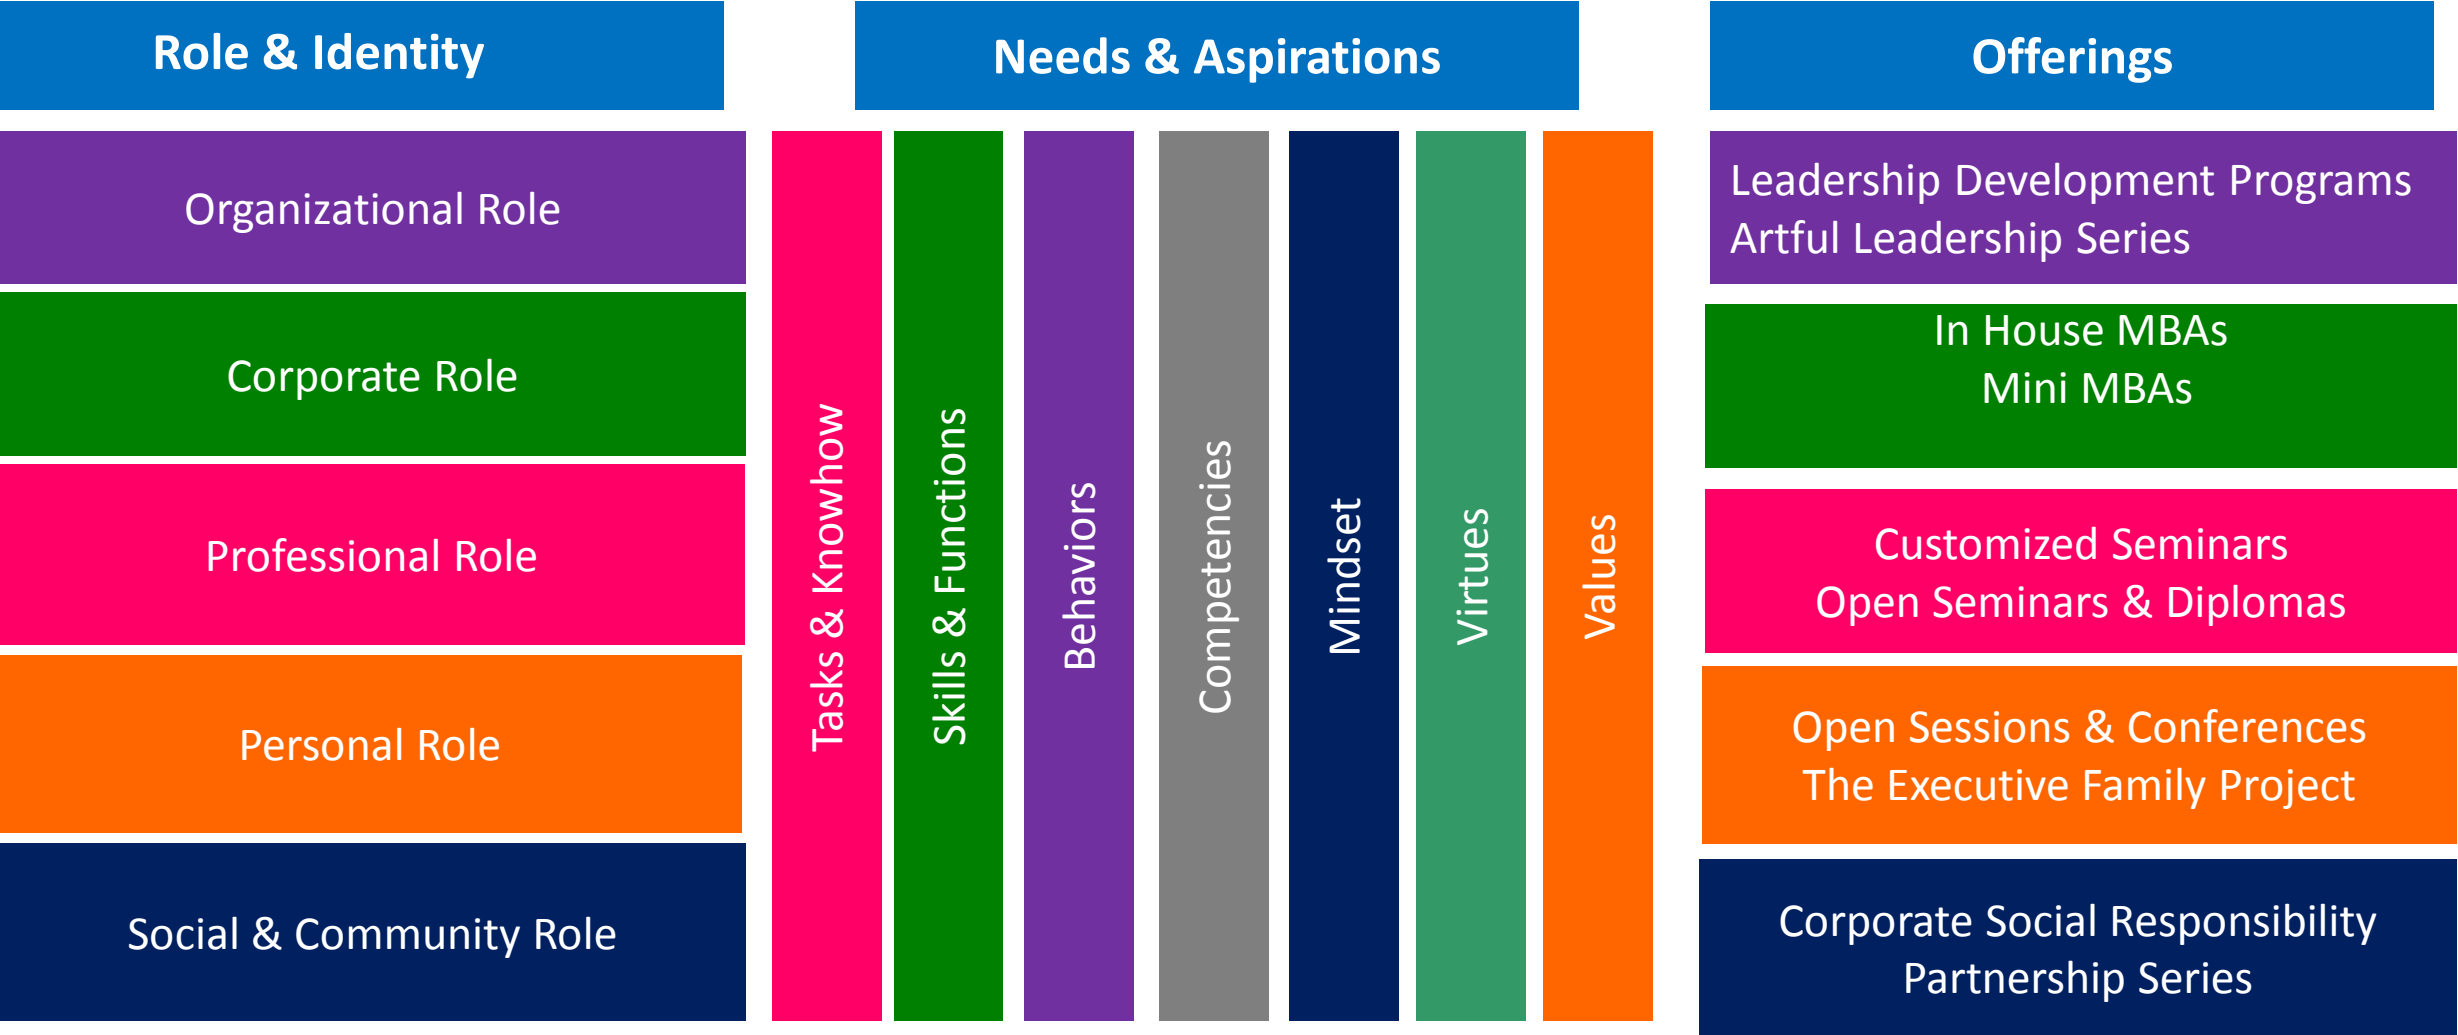

~Holism has been widely applied in philosophy, sociology, psychology, branding, ecology and architecture~
