on what else you need to teach to enhance the quality of your students' knowledge of our sustainability challenges and potential solutions.

ENHANCE SUSTAINABILITY LITERACY around the world.

with statistics and worldwide survey.

WHERE DOES IT COME FROM?

The Rio+20 Conference in 2012 confirmed sustainable development as the international framework for action and cooperation and **highlighted the role of Higher Education Institutions** (HEI) in the awareness of sustainability for graduates. Actors of Higher Education Institutions and related organizations acknowledged the responsibility that they bear in the international pursuit of sustainable development. They agreed to teach sustainable development concepts, encourage research on sustainable development issues, green their campuses, support sustainability efforts in the communities in which they reside, and engage with and **share results through international frameworks.**

But there was no tool to ensure that universities were producing sustainability literate graduates before the Sustainability Literacy Test.

The Sustainability Literacy Test is a concrete action for the Higher Education Sustainable Initiative, led by an NGO, hosted and supported by KEDGE Business School and governed by a General assembly composed of international organizations for the Senior Advisory Board and Academic networks for the Regional / National Expert Committee.
